

Topic : Force and Friction

Part 1:

1.What is Force?

--> **Force** is defined as an external cause that a body experiences as a result of interacting with another body. Whenever two objects interact, a force is exerted on each object.

2.Formula of Force:

$$F=ma$$

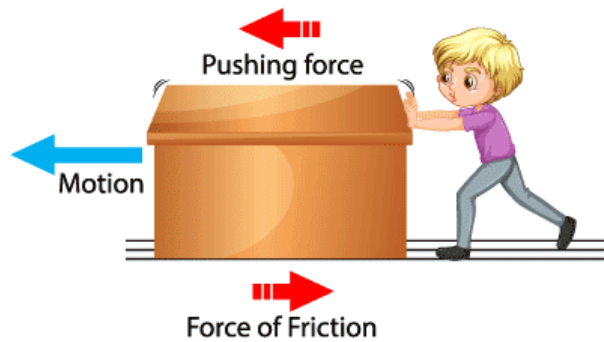

Where, m is Mass of an object

a is the acceleration of the object.

[Simulation OF Football Here]

Part 2:

1.What is Friction?

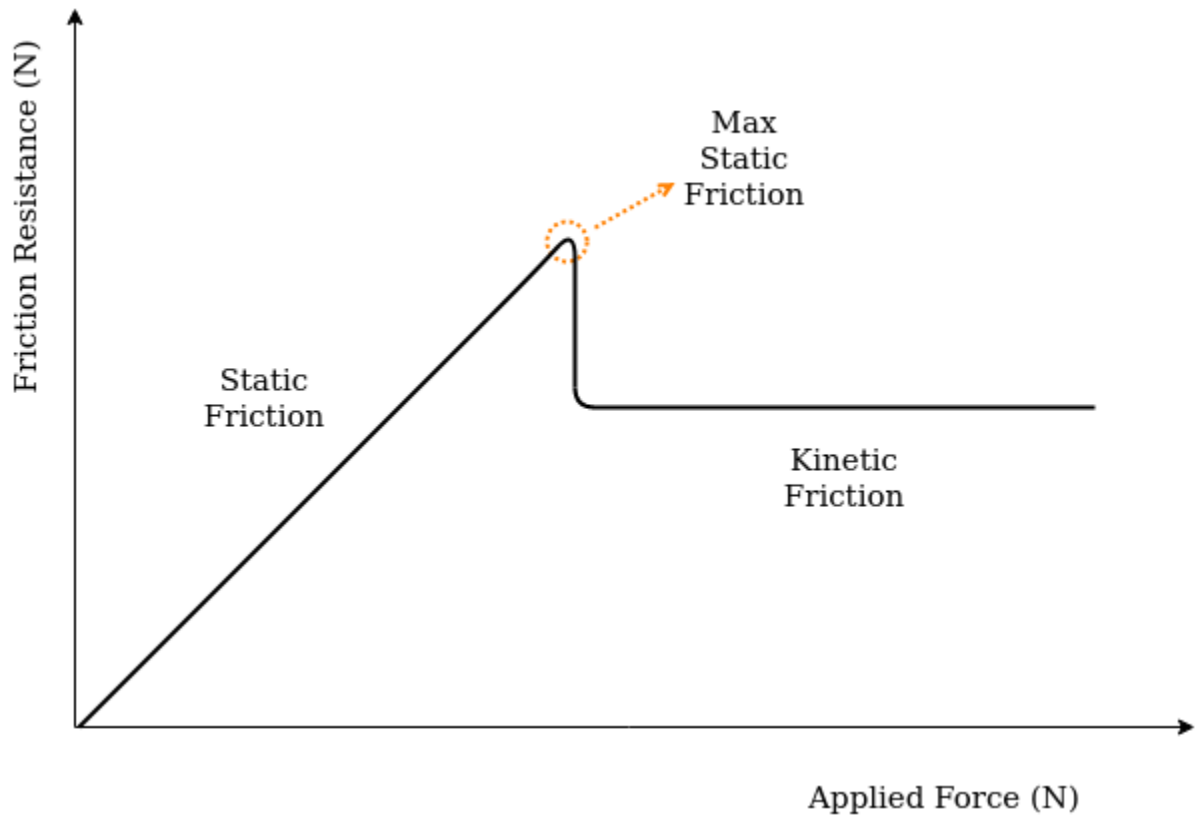

--> **Friction** is a force that opposes the motion of the object to which it is applied.

2.Types of Friction (Already mentioned on the website)

[Simulation Here]

Part 3:

RELATION BETWEEN FORCE & FRICTION:

Key Relationship

1. Friction depends on force (normal force):

$$f = \mu N$$

- μ = coefficient of friction
- N = normal force
